PROFILE

Product Designer with experience across fintech, enterprise data and B2B products, now based in the UK. I design from evidence, backed by a data analytics certification (ADsP), and build hands-on with AI tools like Claude Code, Cursor and Figma MCP. Right now I am designing and building a hospitality operations app end to end. I find problems before being asked and carry them through to shipped, measured results.

EXPERIENCE

Product Designer | B2B cafe & hospitality operations app (pre-launch) Jun 2026 - Present

- Identified a systemic workflow problem first-hand in hospitality: paper-and-memory task tracking forced **30 to 45 minutes of daily overtime** against a 30-minute closing window
- Ran qualitative field research with baristas during live shifts, reframing the root cause from task friction to the recording system
- Built the first working version through prompt-driven development (Claude Code, Cursor, Figma MCP), **cutting record-keeping time by around 50%** in initial testing
- Own the product end to end in agile collaboration with a remote developer, designing WCAG-informed contrast and touch targets for the pace and age range of hospitality work

UI / Motion Graphic Designer | Kia Motors, Remote Nov 2025 - Dec 2025

- Designed onboarding content for Kia's new-car delivery experience, screen-guided walkthroughs that new owners follow inside their vehicle; shipped and in use at customer handovers
- Produced UI screens and a looping motion intro within Kia's brand guidelines and design system, iterating through agency-led review cycles with the in-house design team

Product Designer | Marin Consulting, Chester, UK Jul 2025 - Aug 2025

- Digitised a paper-based manufacturing records system as sole designer, researching through paper-form analysis and developer field reports under security-restricted site access
- Mirrored existing paper conventions in the UI, down to form colour coding, to minimise retraining and cognitive load for engineers

Product Designer | Custom Connect (cryptocurrency exchange startup) May 2023 - Jul 2024

- Designed a crypto exchange web platform end to end from zero: research, information architecture, user flows and UI
- Diagnosed stalled signups as a trust problem, not a CTA problem: a signup-first landing felt high-commitment for a new exchange
- Redesigned onboarding around browse-before-commit, opening live charts, trending coins and top-trader performance to logged-out users; **session duration rose from 45s to 120s** and **signup conversion from 4% to 25%**, tracked in Google Analytics
- Partnered with marketing on an in-platform content hub for crypto beginners, creating a reason to return between trades; trading activity grew following the relaunch
- Built the design system from scratch to ease developer collaboration and keep the UI consistent, and used it to onboard and mentor a junior designer as the team grew

UX/UI Designer | Harim Holdings (major food & agriculture conglomerate) Jun 2022 - Aug 2022

- Designed Tableau dashboards consolidating distribution, export and lab data across subsidiaries, replacing a hard-to-read legacy system with a clear visual hierarchy that surfaces top performers at a glance

- Scoped requirements through workshops with department heads and shaped role-based data access by department, seniority and subsidiary
- Worked with engineering to replace traffic-heavy live refresh with nightly batch loads, enabling instant filtering and **cutting report-data retrieval time by 60%** (validated in post-launch user feedback)

SKILLS

Design: End-to-end product design, UX/UI, qualitative and secondary user research, usability testing, information architecture, design systems and tokens, Figma (Variables, Modes), accessibility (WCAG)

AI and Prototyping: Claude Code, Cursor, Google Stitch, Figma MCP, prompt engineering, AI design systems, design.md documentation

Data: ADsP certified, Google Analytics, Tableau, Python and R for data analysis and visualisation

EDUCATION AND CERTIFICATION

BA Communication Design Konkuk University, Seoul	2018
ADsP (Advanced Data Analytics Semi-Professional) Korea Data Agency	2021
Big Data Analysis and Visualisation Using Python and R IT Will Academy	2021
